

# STEP DOWN TRANSFORMER

**Solve Voltage Compatibility Issues With Ease**

**Sometimes electronics and the electrical outlets they depend upon don't match. If equipment needs to run on an outlet with a higher configuration a reduction in voltage is required for operation.**

The ESP Step Down Transformer reduces an incoming 208 Volt wall outlet configuration to 120 Volts. It is a convenient and cost-effective solution to easily adapt your equipment to run on a 208 Volt receptacle without the need for an electrician.

Available in two models, it offers the ability to quickly resolve your power voltage issues and keep your business running without disruption. Just plug it into the outlet, connect your equipment, and you're ready to go.

**Ensure your equipment's voltage problems are addressed with the ESP Step Down Transformer.**

## Features:

- ▶ Steps down power from:
  - 208 Volt/15 Amp to 120 Volt/20 Amp
  - 208 Volt/20 Amp to 120 Volt/20 Amp
- ▶ Plug and go
- ▶ ETL Certified
- ▶ 3-year warranty

*Redefining Power Quality*

Model	Plug Config.	Outlet Config.
SDT208-120/16-20	208V/20A to 120V/20A	6-20R  x1
SDT208-120/16	208V/15A to 120V/20A	6-15R  x1
