

# AXESS ELITE

## Take Control of the Power Environment

The Axess Elite is a complete power management solution that provides remote insight and control of the electrical power consumed by an underlying device. It enables the switching of devices in various power modes, each with different power usage characteristics related to device performance. Giving technicians the ability to easily manage their installs remotely and limit service calls.

The Axess Elite provides IP addressable two-way communication, manages system energy usage, can sequence individual outlets, monitors power usage at the system level, controls expansion units from the master unit, and monitors a system's energy consumption by each connected device. It integrates with most major control systems, including AMX and Crestron.

The user-friendly GUI lets technicians hard reboot locked up equipment, recycle power, schedule automatic triggers to AutoPing devices, monitor individual outlets and power settings to eliminate the time and costs associated with sending a technician on-site.

The Axess Elite also features Advanced Series Mode® technology that eliminates all surge energy to guarantee connected equipment is protected from surges, spikes, electrical transients, and noise without producing harmful ground contamination or common-mode disturbances. It is the most advanced technology available to safeguard AV equipment.

### Features:

- ▶ IP enabled two-way communication
- ▶ Displays real-time power and energy usage
- ▶ Collects rack temperature, voltage, and current draw measurements
- ▶ Displays a log file for advanced monitoring
- ▶ Non-sacrificial components
- ▶ Magnetic shielding steel enclosure
- ▶ 9' grounded 3-wire cord

Model	Plug Config.	Outlet Config.	Rack Size
SX-AX15E	15A/120V	8 Outlets	1 RU
SX-AX20E	20A/120V	8 Outlets 5-15R (x6) 5-20R (x2)	1 RU
