

UPS + Protection

The only UPS with
true power protection

Power outages and electrical transients cause equipment disruption, malfunction, and downtime. The SurgeX SU-1000-Li truly solves both problems by combining an uninterruptible power supply (UPS) to safeguard equipment from outages with Advanced Series Mode® surge elimination technology to eradicate surges, spikes, and electrical noise.

Built with line interactive technology, the UPS provides a fast response time, automatic voltage regulation, and a stable AC source without the constant use of internal batteries. The unit's analytical software allows technicians to manage power settings, view power data, monitor multiple units, and schedule shutdowns and restarts.

Featuring Advanced Series Mode technology, the SU-1000-Li eliminates surge energy to safeguard equipment from electrical transients. It includes catastrophic over/under voltage shutdown and impedance tolerant noise filtering to guarantee power quality remains consistent.

Perfect for installations that have limited rack space, the SU-1000-Li is the logical choice for complete power protection.

Features:

- ▶ Line Interactive technology
- ▶ Analytical software
- ▶ Network protection
- ▶ Telephone line protection
- ▶ 9' grounded line cord

Model	Power Config.	Outlet Config.
SU-1000Li	15A / 120V, 1000 VA / 600W	6 Outlets (2 UPS / 4 Non-UPS)
